Providing a Quality Accommodated Experience in Preparation for and During Post-Secondary School

By Megan Jones

Introduction

The completion of a post-secondary degree has been linked to higher employment rates and higher income in the general population. At the same time, individuals with disabilities are less than half as likely to obtain a post-secondary degree and thus are less likely to be employed or to have a similar income as are individuals without disabilities. One reason for these differences is that the support that youth with disabilities receive in secondary and post-secondary school does not reach far enough toward ensuring that youth with disabilities have the same opportunity to enter, complete, and benefit from post-secondary education as do youth without disabilities.

Case Study: Alice

Alice is 18 years old and is in the middle of her first semester at University. She is legally blind. In high school, Alice was mainstreamed with support from a special resource teacher. The resource teacher provided her with all of her textbooks on tape. She also took all of her exams in the resource room. The teachers in Alice's classes always assigned her to a seat in the front of the classroom, and when she could not see the blackboard they allowed her to stand in front of the board and copy off information. There was also a specialist teacher for the blind who came to visit Alice once a week and taught her things like how to ride the bus from her home to her school. Often the teacher would accompany her to the lunchroom and help her find classmates to sit with. Once a year Alice's mother came in to school and met with the principal, the resource teacher, and the specialist teacher (her IEP team). Alice is very bright, so her IEP team decided she should apply to University.

During the first few weeks of classes at University, Alice meets with a counselor who asks her for documentation of her disability and has her fill out a form that asks for the kinds of accommodations she will need. After a frantic call to Mom to fax over a letter from her doctor stating she is legally blind, Alice writes on the form that she thinks she might need her textbooks on tape.

Alice is having a hard time keeping up in her classes. She missed the first two lectures in history because she couldn't find the classroom. She has all of her textbooks, but when she called the National Library Service for the Blind they only
had one of them in stock and she figured that she
couldn’t ask the disabled services office for help because
they had said that they needed the books two months in
advance.

When Alice gets a “D” on three of her midterm
exams, her mother convinces her to go back to the
disabled student services office for help. Alice does so.
After talking with a counselor and planning how to ask
for accommodations, she feels much better, but the next
day in her Algebra class she is too embarrassed to stand
up in front of the class and ask about a notetaker and a
reader. The next exam turns out to be a “pop quiz,” and
Alice asks the professor about getting the extra time the
counselor had told her she was entitled to. The professor
tells her that having double-time would give her an
unfair advantage over the other students.

At the end of the semester, Alice has three “D’s” and
one “C.” She is also very lonely, and spends all of her
time sitting alone in her dorm room. She is seriously
thinking of leaving University and moving back in with
her parents.

What is An “Accommodated” Versus
A “Quality Accommodated” Educational
Experience?
An “accommodated” educational experience focuses on
meeting legal mandates such as the Individuals with
Disabilities Education Act (IDEA), Section 504 of the
Rehabilitation Act, and the Americans with Disabilities
Act (ADA). These legal mandates represent minimum
standards for accommodating individuals with disabilities
in educational settings. A “quality accommodated”
educational experience, on the other hand, focuses not
only on meeting legal mandates, but also on using best
practices to support the learning experience of all stu-
dents, including those with disabilities. The table above
gives several examples of an “accommodation” versus a
“quality accommodation.”

Challenges to Providing a Quality
Accommodated Experience
The reality is that many youth with disabilities are not
adequately prepared to meet the entrance requirements
and academic rigor of post-secondary institutions. Nor
are they, like Alice, necessarily prepared for their chang-
ing role in the provision of disability-related supports. At
the post-secondary level, a focus on meeting minimum
accommodation standards rather than upon the provision
of quality supports presents additional barriers for
students with disabilities.

Secondary School Challenges
• Many school administrators, teachers, staff, students,
and community members do not believe that all
students can achieve to high standards that will enable
them to qualify for post-secondary school programs.
• Supports in secondary school do not adequately take
into account the transition from secondary to post-
secondary school environments.

<tr>
<td>The post-secondary education student must initiate support provision.</td>
</tr>
<tr>
<td>In post-secondary school, diverse teaching materials are faculty-specific and require the student to personally advocate for accommodations.</td>
</tr>
</tbody>
</table>
Many students with disabilities are not active participants in the planning of their education and supports. They may have a poor understanding of their own disability and their support needs related to that disability.

Post-secondary School

• In post-secondary school, students with disabilities are expected to take a greater role in the identification of both their disabilities and the kinds of supports they will receive than they do in secondary school.
• Campus administrators and faculty have a poor understanding of how to modify their policies and teaching methods to accommodate students with disabilities in a meaningful way.
• Many post-secondary schools focus on equal access, ensuring their compliance with disability discrimination legislation, rather than on ensuring a quality experience for their students with disabilities.

Steps We Can Take to Provide A Quality Accommodated Experience

Students, Parents, Administrators, and Instructors can —

• Encourage students with disabilities to develop self-determination and self-advocacy skills early on in their secondary school experience, through such means as greater participation in their IEP teams and the integration of training in self-advocacy and self-determination skills into their curriculum.
• Recognize that students with disabilities can achieve high standards.
• Pay attention to the provision and transfer of technology that promotes independence and skill development from secondary education to post-secondary education.
• Design and implement both secondary and post-secondary school supports that take into account the differences between secondary and post-secondary school environments, and support students while they make the transition from one to the other.
• Look beyond meeting the letter of the law to ways of ensuring that students with disabilities have a quality educational experience. This can be accomplished through such means as forming a greater partnership with students, fostering collaboration between disability support offices and other resources within and outside of the post-secondary institution, and improving faculty awareness about disability and diverse teaching methods.
